

Week-2

Aim: Familiarization with Arduino and Raspberry Pi board.

Raspberry Pi.

6/11/20

10/2/24

write a Program to interface IR sensor using Arduino board.

IR sensor \rightarrow Infra red sensor / LDR sensor

(Light dependent Resistor)
sensor

\Rightarrow It is based on the Principle of optics.

\Rightarrow IR radiation can be found with the wavelength of these waves range from 0.7 to 5

IR sensor:

IR Transmitter

Hardware Requirements.

1. Arduino Board
2. IR sensor
3. Jumper wires.
4. Arduino Cable.

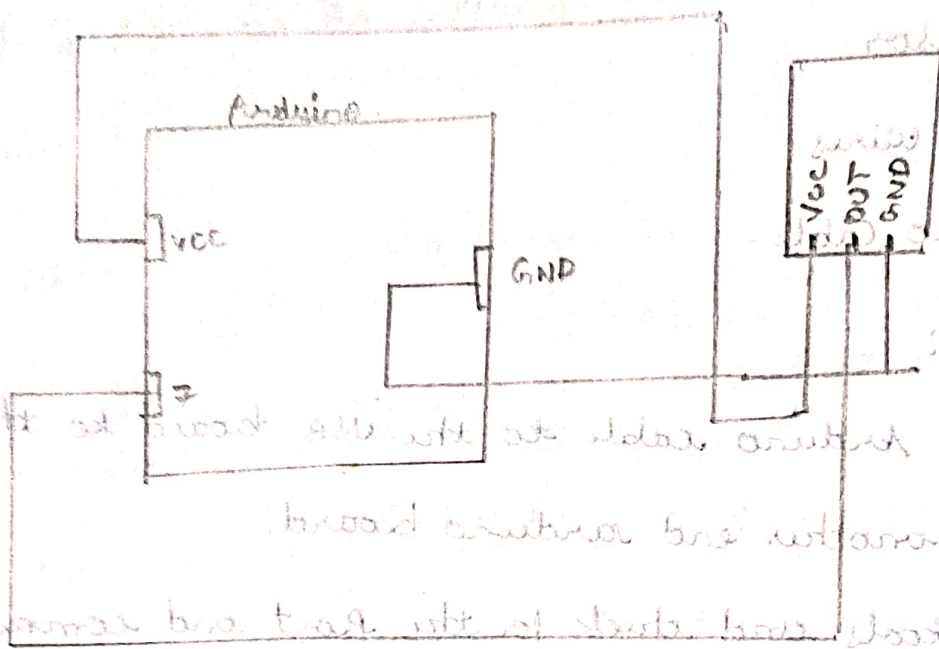

Procedure:

- connect Arduino cable to the USB board to the PC and another end Arduino board.
- go to tools and check for the port and connect to selected Arduino port.
- select the UNO board in the board manager.
- Now connect IR pin to Arduino board to

Jumper wires.

| IR | Arduino |
|-----|------------------|
| VCC | 2.3V |
| GND | GND |
| OUT | Digital pin 0-7. |

Pin Diagrams:

```
int IRPin = 7;
```

```
int led = 13;
```

```
int Value;
```

```
void setup () {
```

```
    pinMode (IRPin, INPUT);
```

```
    Serial.begin (9600);
```

```
    pinMode (led, OUTPUT);
```

```
}
```

```
void loop () {
```

```
    Value = digitalRead (IRPin);
```

```
    Serial.println (Value);
```

if (digitalRead (IRPin) == 0)

{

digitalWrite (led, HIGH);

serial.println ("Object detected");

}

else

{

digitalWrite (led, LOW);

serial.println ("Object not detected");

}

Output:

Object not detected.

0

Object not detected.

0

Object not detected.

0

Object detected.

1

Object detected.

1

Object detected.

1

Serial monitor.

6/11/20

10/2/24

write a Program to interface ultra sonic sensor using Arduino board.

ultra sonic sensor:

- It is an instrument that measures the distance to an object using ultrasonic sound waves.
- It uses a transducer to send and receive ultrasonic pulses that relay back the information about an object.
- It converts a sound signal into electrical signal.
- Principle of ultrasonic.

Transmitter

Receiver

Distance = Time \times Speed of sound / 2.

Time can be calculated by putting.

ultrasonic HC-SR04 module Timing Diagram.

Trig Pin 

Pulse from module 

Echo Pin 

Hardware Requirements:

1. Arduino UNO
2. Arduino Cable.
3. ultrasonic sensor HC-SR04
4. Jumper wires.
5. LED.

| | |
|------|---------|
| VCC | 5V/3.3V |
| GND | GND |
| TRIG | 7 |
| ECHO | 8 |

Pin Diagram.

Procedure:

- connect Arduino cable to the USB board to the one end and another end Arduino board.
- Go to tools select port, and select communication board.
- connect jumper wires to the pins.
- verify and upload.
- check the output in the serial monitor.

Program:

```
#define ECHO PIN 7
#define TRIG PIN 8

int led = 12;
int a, b;
```

```
void setup()
```

```
{  
  Serial.begin(9600);  
  pinMode(ECHO PIN, INPUT);  
  pinMode(TRIG PIN, OUTPUT);  
  pinMode(led, OUTPUT);  
}
```

```
void loop()
```

```
{  
  digitalWrite(TRIG PIN, LOW);  
  delayMicroseconds(2000);  
  digitalWrite(TRIG PIN, HIGH);  
  delayMicroseconds(1000);  
  float a = pulseIn(ECHO PIN, HIGH);  
  digitalWrite(led, HIGH);  
  b = a * 0.0344 / 2;  
  Serial.print(b);  
  Serial.println("cm");  
  delay(1000);  
}
```

output: Serial Monitor.

0 cm
2067 cm
27 cm
14 cm
8 cm
5 cm
11 cm
110 cm
2323 cm.
